

Checklist for Faculty

GEOC's main charge is to make sure that courses that are being taught or being proposed are general education courses that meet the General Education learning outcomes and course characteristics (if applicable). The requirements for G.E. courses can be found in the GEOC Guide to Faculty and in the General Education Framework document (which contains the same information). GEOC will no longer accept a representative syllabus for recertification (we will accept a representative syllabus for a new course proposal). Be sure to use a syllabus from the course as it is taught. Department chairs are responsible for making sure their faculty know the GE learning outcomes/course characteristics and that any course that has GE and/or Overlay certifications are adhering to these. It should not be within GEOC's purview to correct course proposals that arrive at GEOC that are either missing critical information or contain misalignments between the syllabus and what is written in Curriculog. This indicates that the course, as it is described in the uploaded syllabus/Curriculog language, is not a G.E. course. Be aware that much of what was entered in Curriculog was done during semester conversion and is no longer applicable. Please be sure that the language in Curriculog aligns to how the course is currently being taught.

Proposals should arrive at GEOC in perfect condition. If they are not, it causes more work for the originator as well as GEOC. GEOC cannot guarantee that inadequate proposals will reach **the President by Feb. 1st.**

Please note that if GEOC requests changes (either with conditionally accepted or tabled proposals), and the requested changes are not made, the proposal will be rejected and the GE and/or overlay status will be removed. Originators will have the chance to resubmit proposals the following academic year.

Also note that all proposals need to be launched in Curriculog by Sept. 15th. If not, the proposal will need to wait until the following academic year.

For all General Education courses:

Checklist	Annotation	Decision if item is not present:	Decision if item is not corrected
All syllabi must adhere to the new Syllabus policy .	Please note all of the requirements for syllabi in the new policy. Be sure to	If this does not affect GEOC's decision-making capability, GEOC will	Flag proposal and send it on to CIC

	have a “Course outline with due dates for key assignments” as that will help GEOC understand your proposal.	send it on to CIC for their decision.	
Be sure to run the Impact report and contact any department that might be affected by proposed changes.	A change in one course can affect other departments so it is crucial to consult before moving ahead with changes.	Send Proposal to CIC	Consultation takes place before proposals reach GEOC, but the proposals must reach Academic Affairs by the Oct. 15th deadline or the proposal will need to wait until the following academic year.
Be sure that the syllabus provided is the syllabus that is actually used in the course . We will take a representative syllabus for a new course proposal .	As of Spring 2023, GEOC will no longer be accepting ‘representative’ syllabi for recertification. All recertified courses have been taught and departments will need to provide the syllabus used in teaching the course. If multiple sections/instructors are used, then the department will need to choose one (and they all should be using the GE learning outcomes and course characteristics).	Table and ask for the actual syllabus.	Reject proposal

Be sure that your assignments/learning activities align with the GE learning outcomes/course characteristics	All assignments/learning activities must align with the GE learning outcomes. So if the learning outcome states “Analyze cultural production...” (UD-C), then there must be at least one assignment that relates to cultural production.	Table if the correction is easy to do. Reject if there are extensive issues with the proposal.	Reject proposal
Be sure that you show, in Curriculog, where assessment of the learning outcomes is occurring	All learning outcomes in the course will need to be assessed by your assignments. Be sure that it is very clear where this is happening.	Table	Reject proposal
Be sure that assignments that are listed on the syllabus align with what is in Curriculog.	Any assignments used for assessment in a course must be noted in Curriculog. For example, if you state there is a 3,000 word essay with a chance of revision on your syllabus, be sure this is in Curriculog. Misalignment would be stating in Curriculog that there is a 500 word essay while your syllabus states there is a 3,000 word essay.	Table	Reject proposal
Be sure that the syllabus provided makes a clear distinction between	A syllabus with all modalities on it should make it very clear how the course	Conditionally Accept (if an easy fix) or Table with more serious issues.	Reject proposal

how the course is taught online asynchronous/synchronous as well as on-ground.	will be taught if it is, say, taught asynchronously. For example, make it very clear how students will meet the oral communication requirement if the course is taught asynchronously. A misalignment would be if a syllabus states that students will present in class, but the course is taught asynchronously.		
Be sure that the course characteristics are reflected in the syllabus and in Curriculog.	For example, UD-C and UD-D courses require 4,000 words minimum in writing assignments. Be sure that the word count is on the syllabus or in Curriculog	Table	Reject proposal
Be sure that the word counts for all written assignments are listed on the syllabus	While the word count for written assignments is not a requirement for the new syllabus policy, it is a requirement for GEOC.	Table	Reject proposal
Be sure that the official course description is on the syllabus.	This is a requirement of our new syllabus policy. This error should be caught by the department or the college curriculum committee before it reaches GEOC.	Conditionally Accept	Reject proposal

Be sure that the GE learning outcomes are on the syllabus.	This is a requirement of our new syllabus policy. This error should be caught by the department or the college curriculum committee before it reaches GEOC.	Conditionally Accept	Reject proposal
Be sure that any overlay course has the overlay learning outcomes on the syllabus.	This is a requirement of our new syllabus policy. This error should be caught by the department or the college curriculum committee before it reaches GEOC.	Conditionally Accept	Reject proposal
Be sure that the overlay topic is reflected in all aspects of the course such as the readings/assignments/assessments.	An overlay should be the focus of the course and is not something that is dealt with, say, in one week.	Table if this course mostly shows that the overlay area is the focus of the course.. Reject if syllabus indicates it is not the focus of a course.	Reject proposal
If a course characteristic requires collaboration, be sure that students are working together towards a common goal.	Collaboration is working together. Any assignment that shows this is acceptable. However, an example that is not collaboration is a simple discussion board where a student posts an answer to a prompt and another student responds.	Table	Reject proposal
Be sure to note where students receive critical feedback by an instructor if that is a course characteristic.	Critical feedback is feedback given to students in order for them to improve. Feedback only given on an essay due on the last day of class	Table	Reject proposal

	or feedback only on a final exam is not 'critical feedback.'		
Be sure that the course has specific learning outcomes and are not program learning outcomes.	A course should be designed around specific learning outcomes. This is a requirement of the new syllabus policy. This error should be caught by the department and the college curriculum committees before it reaches GEOC. The learning outcomes must not be the program learning outcomes.	Table if the course does not have specific course learning outcomes and send course to CIC.	Reject proposal
Be sure that all GE and or/Overlay courses align with all GE learning outcomes and course characteristics	Please see the GEOC Guide to Faculty for the most updated list of GE learning outcomes and course characteristics.	Table	Reject proposal
